DarthMod: Shogun II is a mod for Total War: Shogun 2, created by Nick "Darth" Thomadis. Description: The DarthMod series of mods continues to improve the AI and gameplay of Total War: Shogun 2 as you have ever wanted. It is compatible with any DLC and campaign (Sengoku Period, Rise of the Samurai). Generally it improves every crucial game installation as you can enable and disable it via a special launcher application. Furthermore you can use additional mods and options with a few clicks. In DarthMod: Shogun II you will enjoy a redesigned melee system which makes battles look like real, "really real"! When 2 armies clash, you will notice violent pushes, formation penetrations, heroic 1vs1 melees, as it would look in a real battle of the era. Arrows spread realistically and are powerful according to the skill of the bowmen, but still no match against the matchlocks. Sieges are really challenging because the new morale, melee and projectile system create a chaotic and difficult to master! The new smoke effects of DarthMod Shogun: II v3.6. All Total War: Shogun 2 DLC and Campaigns are supported and the realistic battle atmosphere becomes complete with super effects that do not decrease FPS but increase it! The mod has installer. [i]Principais mudanças (em inglês): [/i]In short you can call the mod "DMS" from now on. It focuses on gameplay improvements without changing too much the overall vanilla "flavour". Generally it tries to correct the "No Likes" of my review which you can read at this Link. - The speed, accelerations and physics of the units are taken to realistic levels so not only the battles feel more realistic but now you must plan your tactics more carefully because the units do not rush like "Fast Forward Benny Hill" to cover your mistakes. - Various changes to morale and battle mechanics create more lasting battles which are not only an enjoyable experience, due to the fantastic combat animations but also they are very challenging, because the AI benefits from carefully made modding techniques. - Projectiles are not homing to the targets but more realistically spread and can miss. Their lethality and accuracy are not as high as in vanilla in a few words. - Increased unit sizes for epic battles, if the user wants them. Later the sizes will be changed by default without multiplier scripts, when the relevant file is unlocked for modding. - Removed all the insane cheats for the CAI, which provided a "fake" challenge and kept a moderate handicap system that reflects better the actual difficulty level. - Diplomacy and campaign AI have been improved significantly to cover the gap of the reduced handicaps. For example the AI invades with large armies consisted of more samurai than archers (vanilla problem), uses ships better, allies are more trustworthy, realm divide effect is reduced so that the clans do not berserk against you, and so on. - Autocalculation of battles works better. - Fortifications have more garrison troops, so now the major AI clans can survive and become very powerful opponents, like the Oda clan. - The economy system is slightly improved to encourage the recruitment of larger armies for both the AI and human player. - Upgrade points for characters are increased from 2 to 3 for a better and quicker character creation. - Several annoying things, for the majority of players, are removed like the projectile trails (laser trails) and the Horo (Balloon). The removal of laser t- rails in combination with the reduced speeds brings a significant FPS increased army and navy control radius in the campaign map for a more strategic positioning system. An army cannot so easily pass by another armies can trap other armies can trap other armies can trap other armies can trap other armies. - Better naval battles because now ships turn and accelerate not like motorships but like wooden vessels full of soldiers and also there are many other factors affecting the naval battles including the more realistic projectiles. - Ships have much more movement points that makes AI to launch powerful naval invasions. - Clans have more diversity for their special units, so the AI makes the right choice and builds characteristic armies, for example the Takeda raise powerful cavalry, the Date a lot of No-Dachi, Shimazu their deadly Katana, etc. Download: Já tinha visto la no twcenter mas como meu PC nao roda o TWS2 nao dei muita atenção.
